AB The invention refers to an improved vaccine against infections with pathogens, especially viral pathogens, comprising an antigen, a peptide of the formula R1-XZXZN-XZX-R2 and an immunostimulatory deoxynucleic acid containing deoxyinosine and/or deoxyuridine residues. Prepared were influenza vaccine compns. and hepatitis B vaccine compns.

DOCUMENT TYPE: Journal
LANGUAGE: Chinese
AB The serum HSP70 in patients with hepatitis C was detected and its role
in cytotoxicity of specific CTLs induced by HSP70-HCV peptide complex
was evaluated. The serum HSP70 level in patients infected with HCV
and normal individuals were detected by ELISA. The relationship
between anti-HCV antibody and HSP70 was evaluated. Peripheral blood
mononuclear cells (PBMCs) were activated by HSP70-HCV peptide complex
and then 4 h ⁵¹Cr release assay were used to detect the killer
activity of CTLs. Detection rates of HSP70 were 82.1% (22/28) and
18.8% (9/48) in patients with anti-HCV antibody and in normal
individuals, resp. There was significant correlation between the
detection rate of HSP70 and HCV infection ($\chi^2=28.77$, $P<0.01$). The
level of serum HSP70 in patients infected with HCV was markedly more
higher than that in normal individuals. CTLs from one patient induced
by HSP70-HCV C region peptide (DLMGYIPAV) complex could lyse
autologous B lymphoblastoid cell lines (BLCLs) with killer rate of
37.8%, whereas CTLs induced by peptide alone could not lyse autologous
BLCLs cells. HCV infection can induce over expression of HSP70.
HSP70 may have the action of enhancing presentation of HCV epitope
peptide and promoting clearance cells infected with HCV.
IT 215295-45-7
RL: BSU (Biological study, unclassified); BIOL (Biological study)
(HSP70-HCV C region peptide complex cytotoxicity in patients with
hepatitis C infection)

AB The present invention provides (1) an isolated peptide having the amino acid sequence DLMGYIPAV, (SEQ ID NO: 1); (2) an isolated HCV core polypeptide comprising an L→A substitution at amino acid position 139; (3) an isolated HCV core polypeptide having the amino acid sequence of SEQ ID NO: 2; and (4) a fragment of an HCV core polypeptide having fewer amino acids than the entire HCV core polypeptide and comprising the amino acid sequence SEQ ID NO: 1. Also provided are nucleic acids which encode the peptides and polypeptides of this invention, vectors comprising the nucleic acids of this invention and cells comprising the vectors and nucleic acids of this invention. The present invention further provides methods of producing an immune response in a subject and/or treating or preventing HCV infection in a subject, comprising administering to the subject, or to a cell of the subject, any of the compns. of this invention. The present invention also provides methods for determining a viral load and prognosis of a subject diagnosed with hepatitis C virus infection.

AB Since the natural immune response to hepatitis C virus (HCV) is often
unable to clear the infection, to enhance immunogenicity we studied
substituted peptides from an HCV cytotoxic T lymphocyte (CTL) epitope
(C7A2) from a conserved region of the HCV core protein (DLMGYIPLV)
recognized by CTL lines from HLA-A2.1+ HCV-infected patients and
HLA-A2.1 transgenic mice. HLA-A2.1 binding, human and murine CTL
recognition, and in vivo immunogenicity (using mice transgenic for
human HLA-A2 in lieu of immunizing humans) were analyzed to define
peptides with enhanced immunogenicity. Peptides substituted at
position 1 showed enhanced HLA-A2 binding affinity, but paradoxically
poorer immunogenicity. A peptide with Ala substituted at position 8
(8A) showed higher HLA-A2 binding affinity and CTL recognition and was
a more potent in vivo immunogen in HLA-A2-transgenic mice, inducing
higher CTL responses with higher avidity against native C7A2 than
induced by C7A2 itself. These results suggest that peptide 8A is a
more potent in vitro antigen and in vivo immunogen than C7A2 and may
be useful as a vaccine component. They provide proof of principle
that the strategy of epitope enhancement can enhance immunogenicity of
a CTL epitope recognized by human CTL.

TITLE: Immunological significance of cytotoxic T
lymphocyte epitope variants in patients
chronically infected by the hepatitis C virus

AB This study was performed to test the hypothesis that cytotoxic T lymphocyte (CTL) selection of hepatitis C virus (HCV) escape variants plays a role in HCV persistence. The peripheral blood CTL responsiveness of patients with well-established chronic hepatitis C to a panel of 10 prototype HCV peptides (genotype 1a) was compared with the corresponding sequences encoded by the infecting viruses in each patient. Variant viral peptide sequences were threefold more frequent in the presence of a CTL response than in its absence, and CTL responses were detected nearly twice as often in association with variant rather than with prototype viral peptide sequences. Furthermore, over half of the patients were infected with potential CTL escape variants that contained nonimmunogenic and noncross-reactive variant peptides many of which displayed reduced HLA-binding affinity. Surprisingly, follow up anal. over a period of up to 46 mo revealed that, in contrast to the relatively high frequency of escape variants initially observed, the subsequent emergence rate of CTL escape variants was very low. Interestingly, the one escape variant that was detected proved to be a CTL antagonist. Collectively, these observations suggest that CTL selection of epitope variants may have occurred in these patients before their entrance into the study and that it may have played a role in HCV persistence. The low apparent rate of ongoing CTL selection in chronically infected patients, however, suggests that if CTL escape occurs during HCV infection it is probably an early event.

 PS Claim 16; Page 71; 78pp; English.
 XX
 CC Peptide fragments of the Hepatitis C virus (HCV) core polypeptide can be
 CC used to elicit an immune response. A cytotoxic T-lymphocyte (CTL)
 CC response is present in patients acutely and chronically infected by HCV.
 CC CTL's recognise viral antigens as peptides presented by Class I molecules
 CC of the major histocompatibility complex (MHC). These peptide antigens are
 CC typically 8-10 amino acids long. These peptide antigens typically have a
 CC sequence pattern or motif depending upon which particular MHC antigen
 CC they are bound and presented by. The motifs are based on the presence in
 CC precise positions in the peptide sequence of several amino acids
 CC (agretopic residues) called anchor residues, responsible for interactions
 CC between peptide and MHC molecule, as well as other secondary position
 CC that may help to stabilise the interaction. Thus, single amino acid
 CC changes within the peptide sequence can enhance the immune response.
 CC Peptides derived from the HCV core polypeptide having substituted amino
 CC acids within their sequence, specifically a hepatitis C virus core
 CC polypeptide comprising an L to an A substitution at amino acid position
 CC 139 enhance the immune response against HCV. They can therefore be used
 CC as a vaccine or for treating HCV infection. This peptide is a fragment of
 CC the substituted HCV core polypeptide and comprises the region of amino
 CC acids within that polypeptide from position 132 to position 140 which
 CC contains the amino acid substitution

 XX Vaccine useful for preventing viral infections, comprises antigen,
 PT peptide and immunostimulatory oligodeoxynucleic acid molecule.
 XX Example 6; Page 27; 62pp; English.
 XX The invention relates to a vaccine (V1) for preventing viral infections
 CC comprises an antigen, a peptide comprising a sequence R1-XZXNZX-R2,
 CC where N is 3-7 (preferably 5); X is positively charged natural and/or non
 CC -natural amino acid residue; Z is amino acid residue chosen from Leu,
 CC Val, Ile, Phe and/or Trp; R1 and R2 is chosen from -H, -NH2, -COCH3, -
 CC COH, a peptide with up to 20 amino acid residues or peptide reactive
 CC group or peptide linker with or without peptide, and X-R2 may be an
 CC amide, ester or thioester of the C-terminal amino acid residue of the
 CC peptide (Peptide A); and an immunostimulatory oligodeoxynucleic acid
 CC molecule (ODN). (V1) is useful for preventing viral infections cost by
 CC influenza virus, HBV, HIV, HCV, HPV or JEV. A mixture of Peptide A and a
 CC I-/U-ODN (PI) is useful for improving the protective efficacy of (V1).
 CC This sequence corresponds to peptide p87 derived from hepatitis C virus
 CC protein and used in the vaccine of the invention to generate HCV-specific
 CC type 1 cellular response in mice.

CC having specific sequences. Also included is the preparation of VA,
CC involving chemically synthesizing the two epitopes of VA, solubilizing
CC the epitopes by an aqueous solution containing an organic acid chosen
CC from formic acid, acetic acid, propionic acid, butyric acid and its
CC halogenated or hydroxylated forms, mixing the solubilized epitopes and
CC optionally lyophilizing the mixed epitopes. The vaccine is useful for the
CC preparation of a medicament for the prevention and treatment of an
CC infection with HCV. The present sequence is an HCV hotspot epitope.

XX HCV antigen active fusion polypeptide - for the detection of anti-HCV
XX antibodies.
XX
XX Claim 1; Page 9; 15pp; Japanese.
XX
XX The polypeptide provokes an antibody response to hepatitis C virus (HCV).
XX It can be produced in large quantities by fusing this coding sequence to
XX the beta-galactosidase gene and then transforming E. coli with the
XX resulting construct. The E. coli can then be cultured and the fusion
XX protein expressed and recovered from the supernatant. The polypeptide
XX reacts specifically with anti-HCV antibodies and can be used for the
XX identification of such. It can therefore be used to identify individuals
XX infected with HCV

PS Claim 5; Page 313-314; 319pp; English.

XX The present invention describes a recombinant nucleic acid (1) comprising
CC a nucleotide sequence encoding a protein having an avian lysozyme leader
CC peptide, or its functional equivalent, joined to a Hepatitis C virus
CC (HCV) envelope protein or its part. Also described: (1) a vector
CC comprising the recombinant nucleic acid; (2) a host cell comprising the
CC recombinant nucleic acid or the vector; and (3) a method for producing
CC HCV envelope protein or its part in a host cell, comprising transforming
CC the host cell with the recombinant nucleic acid or with the vector, where
CC the host cell is capable of expressing the protein cited above. (1) has
CC hepatotropic, virucide and antiinflammatory activities, and can be used
CC in gene therapy and vaccines. The recombinant nucleic acid is useful for
CC efficient expression of Hepatitis C virus envelope proteins in eukaryotic
CC cells, such as yeast cells. The HCV envelope proteins may be used as a
CC vaccine, or for incorporation into an immunoassay for the detection of
CC anti-HCV antibodies, and/or genotyping of HCV, for prognosing or
CC monitoring of HCV disease, or as a therapeutic agent. The method is used
CC for producing HCV envelope protein or its part in a host cell. AB084197
CC to ABQ84253 and ABP5528 to ABP55368 represent sequences used in the
CC exemplification of the present invention

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 A:Cross-references: UNIPROT:P27958; UNIPARC:UPI000004ACD7; GB:M67463; NID:G329737; PIDN:R:Inchauspe, G.; Zebedee, S.; Lee, D.H.; Sugitani, M.; Nasoff, M.; Prince, A.M.
 Proc. Natl. Acad. Sci. U.S.A. 88, 10292-10296, 1991
 A:Title: Genomic structure of the human prototype strain H of hepatitis C virus: compared to GenBank, July 1992
 A:Reference number: A41546; MUID:92052256; PMID:1658800
 A:Contents: annotation
 A:Note: neither amino acid nor nucleotide sequence is given
 C:Superfamily: hepatitis C virus genome polyprotein
 C:Keywords: ATP; capsid protein; envelope protein; glycoprotein; hydrolase; nonstructural protein NS4a; nonstructural protein NS4b; nonstructural protein NS5
 F:1-115/Product: capsid protein C #status predicted <CPC>
 F:116-191/Product: envelope protein M #status predicted <EPM>
 F:192-389/Product: major envelope protein E #status predicted <MEE>
 F:390-729/Product: nonstructural protein NS1 #status predicted <NS1>
 F:730-1006/Product: nonstructural protein NS2 #status predicted <NS2>
 F:1007-1615/Product: hepatitis C virus (strain H) (nonstructural protein NS4a; nonstructural protein NS4b; nonstructural protein NS5)
 F:1230-1237/Region: nucleotide-binding motif A (P-loop)
 F:1312-1317/Region: nucleotide-binding motif B
 F:1316-1319/Region: DEXH motif
 F:1616-1862/Product: nonstructural protein NS4a #status predicted <N4A>
 F:1863-2011/Product: nonstructural protein NS4b #status predicted <N4B>
 F:2014-3011/Product: nonstructural protein NS5 #status predicted <NS5>

JC5620

genome polyprotein - hepatitis C virus (isolate EUH1480)
N:Contains: capsid protein C; envelope protein M; hepatitis C virus (nonstructural protein NS4a; nonstructural protein NS4b; nonstructural protein NS5
C:Species: hepatitis C virus
C:Date: 19-May-2000 #sequence_revision 19-May-2000 #text_change 09-Jul-2004
C:Accession: JC5620

R:Chamberlain, R.W.; Adams, N.J.; Taylor, L.A.; Simmonds, P.; Elliott, R.M.
Biochem. Biophys. Res. Commun. 236, 44-49, 1997
A:Title: The complete coding sequence of hepatitis C virus genotype 5a, the predominant
A:Reference number: JC5620; MUID:97366593; PMID:9223423

A:Accession: JC5620
A:Molecule type: mRNA

A:Residues: 1-3014 <CHA>
A:Cross-references: UNIPROT:O39928; UNIPARC:UPI0000174A01; GB:Y13184

A:Experimental source: genotype 5a, which predominates in South Africa
A:Note: the translation of the nucleotide sequence is not complete in this paper

C:Superfamily: hepatitis C virus genome polyprotein
C:Keywords: ATP; glycoprotein; hydrolase; nucleotide binding; P-loop; polyprotein; serin

F:2-115/Product: capsid protein C #status predicted <CPC>
F:116-191/Product: envelope protein M #status predicted <EPM>

F:132-389/Product: major envelope protein E #status predicted <MEE>
F:384-408/Region: hypervariable #status predicted

F:390-730/Product: nonstructural protein NS1 #status predicted <NS1>
F:731-1007/Product: nonstructural protein NS2 #status predicted <NS2>

F:1008-1616/Product: hepatitis C virus #status predicted <NS3>
F:1231-1238/Region: nucleotide-binding motif A (P-loop)

F:1313-1318/Region: nucleotide-binding motif B
F:1317-1320/Region: DEXH motif

F:1617-1863/Product: nonstructural protein NS4a #status predicted <N4A>
F:1864-2014/Product: nonstructural protein NS4b #status predicted <N4B>

F:2015-3014/Product: nonstructural protein NS5 #status predicted <NS5>
F:2210-2249/Region: interferon sensitivity determining #status predicted

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images include but are not limited to the items checked:

☐ BLACK BORDERS

☒ IMAGE CUT OFF AT TOP, BOTTOM OR SIDES

☐ FADED TEXT OR DRAWING

☐ BLURRED OR ILLEGIBLE TEXT OR DRAWING

☐ SKEWED/SLANTED IMAGES

☐ COLOR OR BLACK AND WHITE PHOTOGRAPHS

☐ GRAY SCALE DOCUMENTS

☐ LINES OR MARKS ON ORIGINAL DOCUMENT

☒ REFERENCE(S) OR EXHIBIT(S) SUBMITTED ARE POOR QUALITY

☐ OTHER: _____

IMAGES ARE BEST AVAILABLE COPY.

As rescanning these documents will not correct the image problems checked, please do not report these problems to the IFW Image Problem Mailbox.
